'joe' editor

'joe' is a powerful editor and a lot more forgiving than 'vi', but needs to be installed as a separate package and may not always be available. You can get away with knowing only ^K X, and even that is shown in the on-screen help!

`^K H    (Ctrl-K, H)`	Toggle help on/off
`^C`	Quit without saving
`^K X`	Write and quit
`^K D`	Write (optionally to a different filename) without quitting
`^R`	Redraw screen
`^T T`	Toggle insert/overwrite mode
`^A`	Move to start of line (or use 'Home')
`^E`	Move to end of line (or use 'End')
`^K L num   [Enter]`	Go to line number *num*
`^K V`	Got to last line
`^K F pattern   [Enter]`	Search for pattern; gives options for backwards and replace
`^L`	Repeat last search
`^Y`	Delete entire line
`^_`	Undo (on some terminals, Ctrl-Shift-Underscore is required)
`^K B`	Mark start of block
`^K K`	Mark end of block
`^K C`	Copy block to current cursor position
`^K M`	Move block to current cursor position
`^K Y`	Delete block
`^K W`	Write block to a file
`^K R`	Insert file at current cursor position

You can get alternative key bindings by invoking as 'jmacs', 'jstar' or 'jpico' which correspond to emacs, WordStar and pico respectively.
