

Thursday morning wireless worksheet:

projects

Backup configuration

Firmware upgrade

Enable ssh

Switch management to https

Enable ntp

Configuration backup:

1. log into ap
2. go to system menu
3. select download from the configuration management section
4. name the configuration to be consistent with that of the ap e.g. groupx-apx where your group and ap number are represented

firmware upgrade:

1. log into ap
2. go to system menu
3. select upgrade firmware
4. select the appropriate firmware for the device from the usb key
5. compare versions making sure the one that you're uploading is newer
6. once the ap reboots confirm by visiting the system menu again that the ap has the newer firmware by visiting the system menu

enable ssh:

1. go to services menu
2. enable ssh
3. select change
4. select apply

Switch management to https;

1. go to services menu
2. select use secure connection
3. change
4. apply
5. Note that now, when you point your browser at the system you'll get a certificate warning for which you'll have to configure an exception.

Enable NTP

1. go to services menu
2. enable ntp
3. set server to 192.168.1.1
4. change
5. apply
